

Dear Hiring Manager,

I am writing to express my interest in the Intern – Dashboard and Analytic Tool Development (13206) position at Seagate. As a final-year B.Tech student in Computer Science and Engineering at Jain University, with a CGPA of 9.09, I am eager to apply my analytical and technical expertise to contribute to Seagate's data-driven innovation initiatives.

My academic and internship experiences have given me a strong foundation in data analytics, dashboard development, and software engineering. During my recent internships with Nestlé India Ltd. and Safear Defense Pvt. Ltd., I worked on IT compliance and AI-driven system enhancements, which strengthened my understanding of how technology can improve operational efficiency. Additionally, at MBA Coach, I optimized a React-based web platform by reducing server load and improving front-end performance — an experience that sharpened my full-stack development and analytical problem-solving skills.

My technical toolkit includes Python, JavaScript, SQL, ReactJS, and data visualization tools, complemented by experience with cloud technologies (AWS) and automation scripting. I've also led multiple academic projects — such as a Travel Guide Chatbot and a Neural Network Recommendation System — where I applied machine learning and data processing to derive meaningful insights and improve user experience.

I am particularly drawn to Seagate's focus on data analytics and scalable dashboard solutions that empower smarter decision-making. I am confident that my combination of technical skills, creative problem-solving, and dedication to continuous learning will allow me to make a meaningful contribution to your team.

Thank you for considering my application. I would welcome the opportunity to discuss how my skills and experiences align with Seagate's goals in an interview.

Best Regards,

Divya Sharma
